

SQL Data Analysis Project

Analysis of customer orders and spending behaviour using SQL. Includes joins, aggregations, filtering, and subqueries to generate business insights.

```
-- Total Spending by Country
SELECT c.country, SUM(o.amount) AS total_spending
FROM orders1 o
JOIN customers1 c ON o.customer_id = c.customer_id
GROUP BY c.country;

-- Customer Order Count & Spending
SELECT c.first_name, c.last_name,
COUNT(o.order_id) AS total_orders,
SUM(o.amount) AS total_amount
FROM customers1 c
JOIN orders1 o ON c.customer_id = o.customer_id
GROUP BY c.customer_id, c.first_name, c.last_name;

-- Top 5 Customers
SELECT c.first_name, c.last_name, COUNT(o.order_id) AS total_orders
FROM customers1 c
JOIN orders1 o ON c.customer_id = o.customer_id
GROUP BY c.customer_id, c.first_name, c.last_name
ORDER BY total_orders DESC
OFFSET 0 ROWS FETCH NEXT 5 ROWS ONLY;

-- Average Spending by City
SELECT c.city, AVG(o.amount) AS avg_spending
FROM customers1 c
JOIN orders1 o ON c.customer_id = o.customer_id
GROUP BY c.city;

-- Highest Spending per Customer
SELECT c.first_name, c.last_name, o.amount
FROM orders1 o
JOIN customers1 c ON o.customer_id = c.customer_id
WHERE o.amount = (
    SELECT MAX(amount)
    FROM orders1
    WHERE customer_id = o.customer_id
);
```
